

### THE FITNAH OF THE ASTRONOMERS AND THEIR MUNAAFIQ FOLLOWERS

Among the *fitan* (plural of *fitnah*) of these times in close proximity to Qiyaamah is the *fitnah* of hilaal predictions by astronomers who are of the ilk of astrologers (fortune-tellers). Among the ulama-e-soo' fraternity such as the MJC and NNB jamiat outfits, there are moron sheikhs and stupid molvis who tag along and accept the predictions of the astronomers as if their views are on par with Wahi.

Rasulullah (Sallallahu alayhi wasallam) had commanded the Ummah to search for the crescent moon at the end of the 29<sup>th</sup> day of the Islamic month. If the moon is not sighted, the month will be 30 days. This is the clear and simple teaching of the Shariah which nobody, no institution and no science followed by morons and atheists can override.

Nowadays these moron astronomers with their stupid predictions indirectly encourage Muslims to discard the command of Rasulullah (Sallallahu alayhi wasallam) in favour of their effects of astrology. They imply that astronomy has rendered the Shariah antique, hence there is no need to submit to the command of our Nabi (Sallallahu alayhi wasallam), which by implication of the morons was meant for bygone eras.

While the Shariah's criterion is *Rooyat-e-Hilaal (Sighting the Moon)*, the criterion of the morons is the *age/birth* of the moon. When in terms of their moronic science the moon will not be visible due to its sapling age, there is no need to 'waste' time sighting it at the end of the 29<sup>th</sup>

day. This is tantamount to kufr.

Regardless of the moon's age, even if it is one hour old, it remains *Waajib Alal Kifaayah* for Muslims to search for the Hilaal at the end of the 29

th

day.

Allah Ta'ala has the power to make it visible regardless of its age.

With their moronic predictions, the moron astronomers create *fitnah* in the community. They divert the focus of ignorant Muslims from the Shariah. They have dinned into the ears of the morons of the NNB jamiat the satanism of confusion with Venus as if Muslim sighters of the moon are so stupid as to be unable to distinguish the hilaal from other heavenly bodies despite the vast difference in the forms of the hilaal and other bodies such as Venus, etc.

If at the end of the 29<sup>th</sup> day, a sighting is reliably reported by reliable Muslims, such sighting shall be accepted and will be binding regardless of the age of the moon and regardless of the predictions of the moron astronomers. Thus, if an *Aadil* sighter reports his sighting, it shall be accepted and have Shar'i credence and force even if the astronomers claim that sighting was not possible.

The community should ignore the rubbish predictions and moronic views of the juhala astronomers. The imperative need is to submit to the Shariah. The rules of the Shariah are extremely simple. If everyone adheres to the Shariah, there will be no problems and confusion. Astronomers and the moron molvis following them are fitnah mongers. Their ideas are tantamount to kufr. They find it loathsome to follow the simple procedures of the Shariah, which they by implication convey to be deficient and not fully applicable to this age in which morons in the form of 'scholars' abound.

The Shar'i process is to search for the hilaal at the end of the 29<sup>th</sup> day even if the moon is one hour old, and to hell with what the moron astronomers say.
