THE SHAITAANIYAT AND DANGERS OF THE COVID VACCINE

“GRAPHENE RIP THE INSIDE OF BLOOD VESSELS”

It is insane to vaccinate for ONE virus in such a way that opens the gates for every other virus on the planet to have free access to the patient. The COVID vaccine reduces the body's ability to produce white blood cells and interferon by 75% or more. This is like having a home security system to blocks one burglar while giving the keys to the home to every other burglar on earth. As if this is not bad enough now it has been discovered that the cause for most of the negative side effects of the COVID vaccine is the graphene oxide (<https://rense.com/general96/graphene-oxide-is-toxic-to-human-blood.pdf>) that is injected along with the vaccine even though there is no reason for it to be an ingredient.

Graphene can form needle-like structures that are virtually undetectable and have the effect of ripping the inside wall of blood vessels. This has a devastating effect on the heart, brain, and many other parts of our body, in fact anywhere where there are blood vessels so basically it can travel though the patient and wreak havoc throughout the entire system. So for anyone wondering about what is causing the seemingly odd assortment of negative side effects, look no further as graphene can be the cause of most of them, I challenge the vaccine manufacturers to defend themselves on this. Please do come up with some mumbo-jumbo denial rhetoric as a means of defending your vile deeds. While you are at it please do explain why the scientist that published his findings on this subject was murdered. Go on...we are waiting. (*Jennifer Henderson: Dec 4, 2021*)

GRAPHENE OXIDE AND COVID VACCINE

By Craig Paardekoppe

The apparent magnetisation of the injection site has been noted and investigated by scientists in Luxembourg –
