THE MASSIVE, DARK, SINISTER COVID & VACCINE PLOT

The ‘Secret Ingredient’ in COVID Vaccines Has Been Found

New peer-reviewed study makes an unexpected discovery.

Published 9 hours ago on October 14, 2024 By [Infowars](#)

Guest post by [Sean Miller](#)

A peer reviewed [study](#) published Friday documented 55 undeclared chemical elements which have been detected in the [exotic](#) Covid [gene therapy](#) technology from brands Pfizer, Moderna, AstraZeneca, CanSino, Sinopharm and Sputnik V.

“A total of 55 undeclared chemical elements were found and quantified with ICP-MS. Combining these findings with results from SEM-EDX, altogether 62 undeclared chemical elements have been found in the various products,” the [study](#) said in the ‘Abstract’ section.

Given the exotic nature of these findings, the researchers deduced that the novel Covid gene therapy technology injections are in fact, part of a secret worldwide nanotechnological experimentation program.

“Given the diversity and notable presence in all brands, along with the peculiar characteristics of the elements found, it is extremely unlikely, in our judgment, that the findings reported in this paper are due to any fortuitous events such as contamination, or accidental adulteration. We do not believe that accidents owed to chance could occur so consistently and pervasively across the various brands of vaccines that we studied. Whereas the appearance of the daunting diversity of undeclared chemical elements remains strange, the clues seem to be pointing to some kind of worldwide technological experimentation,” the [study](#) said in the ‘Discussion’ section. “Because the lanthanides, as we have noted above, are known to be extremely cytotoxic, their being discovered in significant quantity, and across the whole array of vaccines we have studied here, is suggestive of some kind of nanotechnological experimentation.”

Detection analysis was performed via [ICP-MS](#) technology which uses an ionization source to fully ‘decompose’ a sample into its constituent elements, transforming those elements into ions. Those constituent elements can then be identified.

Notably, most of the specific elements discovered were alarming, as they’re known to be [detrimental to the body](#).

“...among the undeclared elements were all 11 of the heavy metals: chromium was found in 100% of the samples; arsenic 82%; nickel 59%; cobalt and copper 47%; tin 35%; cadmium, lead and manganese in 18%; and mercury in 6%,” the [study](#) said in the ‘Abstract’ section. “In all brands, we found boron, calcium, titanium, aluminum, arsenic, nickel, chromium, copper, gallium, strontium, niobium, molybdenum, barium and hafnium.”

The researchers began by summarizing the Covid vaccination program and its ill-fated consequences.

“The experimental vaccines supposedly invented to combat COVID-19 were coercively forced upon the global population beginning late in 2020. They have precipitated innumerable and varied disease conditions ranging from mild to lethal. This increase in health disorders and sudden deaths began to manifest concomitantly with the number of people inoculated and doses administered per person,” the [study](#) said in the ‘Abstract’ section.

NEW STUDY – At Least 55 Undeclared Chemical Elements Found in COVID-19 Vaccines from AstraZeneca, CanSino, Moderna, Pfizer, Sinopharm and Sputnik V

The Covid shots are a pinnacle of diversity and inclusiveness. They successfully contain all categories of elements except noble gasses.

“Our analysis summarized in Tables 9 and 10 shows the presence of 55 undeclared chemical elements in the 17 samples analyzed from the 6 brands of COVID-19 vaccines. Among the undeclared elements were found to represent all groups of the Periodic Table, except for the noble gases,” the [study](#) said in the ‘Discussion’ section.

Table 3
Chemical Elements Found by ICP-MS in AstraZeneca Lots: † Declared

Chemical Elements		Isotopes	AstraZeneca ABZ3413 (µg/L)	AstraZeneca 210581 (µg/L)
B	Boron	11	20	360
Na†	Sodium	23	1100000	9100000
Mg	Magnesium	24	30000	350000
Al	Aluminum	27	810	
P†	Phosphorus	31		
K	Potassium	39	5100	
Ca	Calcium	40		1800
V	Vanadium	51	2.23	
Cr	Chromium	52	21	44
Fe	Iron	56	82	
Ni	Nickel	58		50
Co	Cobalt	59	0.4	
Cu	Copper	63		34

Total Elements Detected			15	21
Sample Analysis Date			3/11/2023	27/12/2023

Excitingly, AstraZeneca Covid shots contained small amounts of precious metals gold and platinum while Pfizer contained the still-exciting, yet concerning, radioactive metal uranium.

Moderna injections had both gold and uranium but also the additional metal silver, a sought-after commodity.
